MORE ABOUT ME

I am a proactive person, with initiative and I am responsible. Teamwork is another of my strengths.

I'm excited to be able to open up new opportunities, gain new knowledge and keep growing professionally.

PROJECTS INVOLVED

DATA SCIENCE
- *Study of the different characteristics of all mammal species.*
- *Ecomobility*

Obtaining data by applying web scrapping with the Beautiful Soup, Selenium and Helium Python libraries ETL processes to analyze and visualize data.
Use of Machine Learning to create predictive models.
Data visualization through libraries such as Seaborn, Matplotlib and Folium from Python.
Creation of website through Streamlit.

MECHANICAL ENGINEERING
As part of the **UdG Racing Team,** I've been part of an incredible project within the automotive industry.

Development of projects, design and manufacturing of pieces, ensuring compliance with competition rules and norms, cost report, team work... were the main tasks performed every day with the final goal of manufacture our own competition car, overcome the scrutinizing so being able to compete in European circuits.
